EDUCATION

The Northeastern University, ME, USA *June 2025*
M.S. in Computer Science Overall GPA: **4.0**

The Ohio State University, OH, USA *June 2019*
B.S. in Electrical & Computer Engineering Minor in Mathematics

EXPERIENCE

FNZ Information Technology Dec 2021 - July 2022
Analyst Developer *Shanghai, China*

- Worked as a full-stack engineer in agile software development with a focus on the Core Repository - FNZOneX.
- Added a new Adviser group to previous Administrator and Guest groups & modified Declaration scripts from Alchemist based on user permission matrix.
- Embedded Address Lookup API from 3rd party Addressy into all address fields on the website.
- Produced runtime SQL script sets for multiple development/test environments.
- Debugged JavaScript errors from Elements, Console, Sources and Network through browser inspections; utilized Visual Studio debug mode to track aspx/aspx.vb errors.
- Set up, modified and shared IIS server configuration for development and demonstration.
- Collaborated with global IT department and cross-team peers to solve jurisdictional issues.
- Resolved showstoppers & release issues from testers and formulated testing procedure before functional review

Wicresoft Co. Ltd.(Microsoft GCR) Oct 2019 - Dec 2021
Technical Cloud Engineer & Technical Advisor *Shanghai, China*

- Specialized in Azure Monitor, Log Analytics, Automation & App Insights.
- Customized alert configuration, query search, data sampling & performance counter collection.
- Captured & analyzed NetMon, ProcMon & Fiddler traces to troubleshoot issues on agents, hybrid workers and portals; visualized data through Azure dashboard, Metric Explorer & workbook.
- Debugged Application Insights SDK configuration scripts in .Net/.Net Core/Java/Python/JavaScript with Visual Studio/VS Code.
- Helped design, modify and debug PowerShell/Python/PS workflow/graphical Runbooks & DSC configuration; advised on partner integration and workspace solutions, e.g. Update Management, Auto Start/Stop VMs, Change Tracking and Inventory
- Served key clients such as Adobe, Intel, and Amazon and dealt with risky or long-term case escalations.
- Monitored technical work of 12 team members in Shanghai, Wuxi and Beijing; resolved scoping confliction between our team and other teams.
- Cooperated with Team leader and Partner TA on case analysis, employee recruitment & team planning.

PROJECT

Dataset Distillation of Galaxy CNN Sep 2024 - Apr 2025
Inst. Tala Talaei Khoei *NEU*

- Demonstrated superior performance in tasks like galaxy morphology classification by using a distilled and curated version of the newest Galaxy Zoo dataset.
- Careful tuning of statistical significance thresholds for validation loss trends to optimize performance.
- Used STM to prevent overfitting and accelerate the learning process.
- Offered higher classification accuracy and more efficient training, while mitigated class imbalance and improved overall data quality.
- A manuscript detailing this work is currently under review at Springer.

Knowledge Distillation of Deep Reinforcement Learning Jul 2023 - Sep 2023
Inst. Mark Vogelsberger *MIT*

- Built up a teacher model, and a student mode based DRL code from Pytorch DQN section.
- Carried out comparative experiments in the typcial CartPole environment from Gymnasium.
- Changed parameters like temperature and recurrency to test the efficiency of knowledge distillation.
- Compared different MDPs in CartPole, MountainCar, Acrobot, LunarLander and Pendulum.
- Realized knowledge distillation in the more complicated DRQN.
- The core findings of this project were published as a full paper at ICICML 2023: https://doi.org/10.1109/ICICML60161.2023.10424889

Capstone : Solar Panel Validation Device Jan 2019 - Apr 2019
Inst. Haskell Jac Fought *OSU*

- Developed a Bluetooth serial communication module on Android Studio.
- Designed software requirements, features and behavior charts.
- Converted Arduino coding to Android.

Advanced Energy Vehicle Design-and-Build Project Jan 2016 - May 2016
Inst. Lauren Corrigan *OSU*

- Coded Arduino through Arduino Integrated Development Editor.
- Used Solid Works to design components of Arduino with its size and shape controlled precisely.
- Recorded Arduino performance and helped improve its air dynamic efficiency.

CO-OP & PART-TIME

NEU Machine Learning Course Jan 2025 - May 2025
Teaching Assistant *Maine, USA*

- Guided students to familiarize themself with various types of machine learning models & correpsonding technics.
- Discussed with professor about the allocation of courses; answered questions and graded assignments in office hours.

OSU ECE Department Laboratory Sep 2018 - Dec 2018
Monitor & Grader *Ohio, USA*

- Guided students to practise coding with TI MPS430 series micro-controller.
- Reviewed their weekly test papers and experiment reports.

Huahong Jitong Smart System May 2018 - Jul 2018
Software Development Engineer *Shanghai, China*

- Mastered the structure, data flow, operation & coding of Automatic-Fare-Collection(AFC) system.
- Improved the UI design and updated the traffic data for transit system of Xi'an Metro Line 1-Line 4.
- Contributed to the database transfer from Oracle SQL to DB2.

CEFC China Energy May 2017 - Jul 2017
Information System Engineer *Shanghai, China*

- Developed an intelligent OA schedule to interact with CEFC APP(Android / IOS).
- Designed an Access VBA instruction set to calculate bills with filtering & tabulation functions.

SKILL

Languages	Python, C#, Java, C++, Golang, Shell, JavaScript, M, VBA, VHDL
Databases	Microsoft SQL, KQL, MySQL, MongoDB, SQLite
Cloud	Azure, AWS, DevOps, Google, Alibaba, Tencent
Protocols & APIs	XML, JSON, REST, TCP, UDP
Software	VS, VS Code, SQL Server, Android Studio, Unity, Kusto, IIS, Matlab, Access
Hardware	Arduino, Multiplexers, PLDs, Clocked Sequential Circuits,VLSI
