

SELF-INTRODUCTION

This is Edwin, currently working as a Senior AI Development Engineer while serving as CTO for a side venture where I lead technical decision-making and architecture design. My research focused on computer vision and model optimization, with a first-author paper published at ICICML 2023 on knowledge distillation in deep reinforcement learning. Previously, I worked on the Azure Cloud Architecture team at Microsoft and led data analytics and full-stack development at FNZ. I am proficient with PyTorch, TensorFlow, LangGraph, and various AI Agent frameworks including Claude, DeepSeek, and Multica. I look forward to combining my research background and engineering experience to deliver impactful AI solutions.

EDUCATION

The Northeastern University, ME, USA

M.S. in Computer Science

June 2025

Overall GPA: **4.0**

The Ohio State University, OH, USA

B.S. in Electrical & Computer Engineering

June 2019

Minor in Mathematics

EXPERIENCE

Qunxian Group

Senior AI Development Engineer

Jun 2026 - Present

Shanghai, China

- Lead the company's digital transformation strategy, responsible for AI technical architecture design and implementation.
- Guilin Factory AI Data Foundation: Design and build an industrial-grade AI data foundation, integrating multi-source heterogeneous production data, responsible for model training and performance optimization, achieving intelligent upgrading of production processes.
- ERP System Design and Optimization: Lead the intelligent transformation of the ERP system, embedding AI capabilities into core business processes, improving supply chain management and resource allocation efficiency.
- OA Platform AI Transformation: Drive the intelligent upgrading of the company's OA system, integrating AI functions such as intelligent approval, knowledge Q&A, and process automation, significantly improving office efficiency.

Digital Factory (Side Business)

Co-founder & CTO

Jan 2026 - Present

Shanghai, China

- Lead the construction of a distributed AI factory system based on multi-agent collaboration, responsible for overall technical architecture design and AI model orchestration.
- Design and implement hybrid cloud-on-premises inference architecture, integrating multiple large models including Claude Code, DeepSeek V4 Pro, and Qwen (distilled from Opus 4.7). Achieve local low-cost inference through Ollama, optimizing response speed and computing costs.
- Build a multi-Agent collaboration framework using Multica + OpenClaw, scheduling digital employees like Hermes and QoderWake to process complex tasks in parallel, enabling an automated pipeline for game design operations.
- Establish the technical infrastructure from scratch, covering core modules including AI inference, task orchestration, and multi-model routing.
- Expand the business from game design to multiple verticals including group buying, demonstrating strong system portability and horizontal scalability.

FNZ Information Technology

Analyst Developer

Dec 2021 - July 2022

Shanghai, China

- Worked as a full-stack engineer in agile software development with a focus on the Core Repository - FNZOneX.

- Added a new Adviser group to previous Administrator and Guest groups & modified Declaration scripts from Alchemist based on user permission matrix.
- Embedded Address Lookup API from 3rd party Addressy into all address fields on the website.
- Produced runtime SQL script sets for multiple development/test environments.
- Debugged JavaScript errors from Elements, Console, Sources and Network through browser inspections; utilized Visual Studio debug mode to track aspx/aspx.vb errors.
- Set up, modified and shared IIS server configuration for development and demonstration.
- Collaborated with global IT department and cross-team peers to solve jurisdictional issues.
- Resolved showstoppers & release issues from testers and formulated testing procedure before functional review

Wicresoft Co. Ltd.(Microsoft GCR)

Oct 2019 - Dec 2021

Technical Cloud Engineer & Technical Advisor

Shanghai, China

- Specialized in Azure Monitor, Log Analytics, Automation & App Insights.
- Customized alert configuration, query search, data sampling & performance counter collection.
- Captured & analyzed NetMon, ProcMon & Fiddler traces to troubleshoot issues on agents, hybrid workers and portals; visualized data through Azure dashboard, Metric Explorer & workbook.
- Debugged Application Insights SDK configuration scripts in .Net/.Net Core/Java/Python/JavaScript with Visual Studio/VS Code.
- Helped design, modify and debug PowerShell/Python/PS workflow/graphical Runbooks & DSC configuration; advised on partner integration and workspace solutions, e.g. Update Management, Auto Start/Stop VMs, Change Tracking and Inventory
- Served key clients such as Adobe, Intel, and Amazon and dealt with risky or long-term case escalations.
- Monitored technical work of 12 team members in Shanghai, Wuxi and Beijing; resolved scoping conflict between our team and other teams.
- Cooperated with Team leader and Partner TA on case analysis, employee recruitment & team planning.

PROJECT

Dataset Distillation of Galaxy CNN

Sep 2024 - Dec 2025

Inst. Tala Talaei Khoei

NEU

- Demonstrated superior performance in tasks like galaxy morphology classification by using a distilled and curated version of the newest Galaxy Zoo dataset.
- Careful tuning of statistical significance thresholds for validation loss trends to optimize performance.
- Used STM to prevent overfitting and accelerate the learning process.
- Offered higher classification accuracy and more efficient training, while mitigated class imbalance and improved overall data quality.

Knowledge Distillation of Deep Reinforcement Learning

Jul 2023 - Sep 2023

Inst. Mark Vogelsberger

MIT

- Built teacher and student DQN models for deep reinforcement learning using PyTorch.
- Carried out comparative experiments in CartPole, MountainCar, Acrobot, LunarLander and Pendulum environments from Gymnasium.
- Systematically tuned hyperparameters (temperature, regression rounds) to evaluate knowledge distillation efficiency across different MDPs.
- Extended knowledge distillation to Deep Recurrent Q-Networks (DRQN) for more complex sequential decision-making tasks.
- The core findings of this project were published as a full paper at ICICML 2023:
<https://doi.org/10.1109/ICICML60161.2023.10424889>

Capstone : Solar Panel Validation Device

Jan 2019 - Apr 2019

Inst. Haskell Jac Fought

OSU

- Developed a Bluetooth serial communication module on Android Studio.
- Designed software requirements, features and behavior charts.
- Converted Arduino coding to Android.

Advanced Energy Vehicle Design-and-Build Project

Jan 2016 - May 2016

Inst. Lauren Corrigan

OSU

- Coded Arduino through Arduino Integrated Development Editor.

- Used Solid Works to design components of Arduino with its size and shape controlled precisely.
- Recorded Arduino performance and helped improve its air dynamic efficiency.

CO-OP & PART-TIME

NEU Machine Learning Course

Jan 2025 - May 2025

Teaching Assistant

Maine, USA

- Guided students to familiarize themselves with various types of machine learning models & corresponding techniques.
- Discussed with professor about the allocation of courses; answered questions and graded assignments in office hours.

OSU ECE Department Laboratory

Sep 2018 - Dec 2018

Monitor & Grader

Ohio, USA

- Guided students to practise coding with TI MPS430 series micro-controller.
- Reviewed their weekly test papers and experiment reports.

Huahong Jitong Smart System

May 2018 - Jul 2018

Software Development Engineer

Shanghai, China

- Mastered the structure, data flow, operation & coding of Automatic-Fare-Collection(AFC) system.
- Improved the UI design and updated the traffic data for transit system of Xi'an Metro Line 1-Line 4.
- Contributed to the database transfer from Oracle SQL to DB2.

CEFC China Energy

May 2017 - Jul 2017

Information System Engineer

Shanghai, China

- Developed an intelligent OA schedule to interact with CEFC APP(Android / IOS).
- Designed an Access VBA instruction set to calculate bills with filtering & tabulation functions.

SKILL

Languages	Python, C#, Java, C++, Golang, Shell, JavaScript, M, VBA, VHDL
ML Frameworks	PyTorch, TensorFlow, Keras, Scikit-learn, LangGraph
Models & AI Tools	Claude, Codex, DeepSeek, Pi, Wan, Flux, Kling, Seedance
AI Agent Frameworks	Multica, HiClaw, PaperClips, Hermes
Model Optimization	Knowledge Distillation, Quantization, Pruning, Inference Acceleration
Databases	Microsoft SQL, KQL, MySQL, MongoDB, SQLite
Cloud	Azure, AWS, Distributed Systems, Microservices
Dev Tools	VS, VS Code, Git, Docker, SQL Server, Kusto, TailScale
Hardware	Arduino, Multiplexers, PLDs, Clocked Sequential Circuits, VLSI

COURSEWORK

Computer	Machine Learning, Database Management Sys, Algorithms, Cloud Computing, Software Development & Design, Operating Systems, Computer Architecture & Design, Computer Organization & Embedded Systems
Electrical	Analog Systems & Circuits, Signal & Systems, Digital Logic, Microcontrollers, Semiconductor Electronic Devices, Optical engineering, Feedback Control Systems, Advanced Digital Design, VLSI Digital Signal Processing Systems
Math	Calculus for Scientists & Engineers, Linear Algebra, Higher Mathematics, Numerical Analysis, Partial Differential Equations
Others	Engineering Economic Decisions, Engineering Ethics, Probability and Statistics
